Subject: RE: text file results from Plus search

Tom,

The PLUS search results are in .txt files on the diskette.

In My Computer, you can go into a:\ and double-click on each of the files to view the content.

Or view the file contents with Notepad or another word processor.

Files include lists of the closest US patent numbers.

The set of resulting patent numbers from file 09993500_LIST.txt can be copied and pasted into the EAST IS&R tab window for browsing.

The entire search statement in the 09993500_EAST.txt file can be copied and pasted into the EAST BRS tab window for further narrowing of the set.

In addition, two of the files contain ranked classification information for the closest patents. One shows classification summaries, the other shows classification title details.

If you would like further assistance, contact Darcy Bates or me.

Thanks,
Jeff

Subject: Plus search

Someone had a plus search done in one of my applications, 09/993,500. I do not know how to retrieve the information from the disk. I put the disk in but there was no automatic startup to display the search results. If you could tell me how to retrieve the search results I will review them.
